SOLVING ASIA'S SLOW BIOGAS GROWTH

The 6th Asia Pacific Biogas Forum took place in Malaysia from 17th – 19th May 2017 at JW Marriott, Kuala Lumpur. The event was coupled with the 2nd International Biogas and Bioenergy Centre of Competence (IBBK) Biogas Training Seminar which was held from 15th - 16th of May.

Coinciding with the second day of the training seminar, the Asia Pacific Biogas Alliance held their Annual General Meeting. The association spoke largely on their ideas and plans for the coming year to grow, as well as their goal to become the unifying voice for the various stakeholders in the region. The association made plans for the establishment of numerous working groups that would tackle various pertinent issues in the industry through the development of white papers and other forms of digital content.

The conference and exhibition kicked off the day after with speakers from all around the Asia Pacific looking at the biogas industry in the region as a collective. Many companies took up booths displaying their equipment and showcasing their latest projects. The exhibitors got the opportunity to grow their network with delegates from the government and private sector alike, discussing various topics on the development and sustainability of the industry, which had appeared to be showing signs of slowing down.

Through the numerous panel discussions, the experts debated this idea that the industry was slowing down and concluded that the industry is indeed doing well in Malaysia. There were admittedly reasons for the appearance of a slowdown but the Malaysian panel were adamant about their resolve and said that based on the figures that it was far from any suggested 'slow-down'.

Speakers also presented ideas for the various biogas opportunities in Malaysia besides in the palm oil industry and spoke of what the future holds for the industry. There were also several presentations on technological developments in upgrading and digestion technology and a discussion on how smart policy development helped Thailand achieve huge success in their own biogas industry. Other key areas of discussions which drew the greatest interest from the delegates were the discussions on financing options and safety.

The last day of the event was a site tour which took delegates who signed up to two biogas plants. One was a sewage treatment plant run by Indah Water in Kampung Pantai and another was a FELDA run palm oil mill and biogas plant in Seriting Hilir. Delegates got to see first-hand the inner workings and processes of a commercial biogas plant in action.
